

## Pneumatic rotary actuator

- Modular program for mounting to armatures such as ball valves and butterfly valves
- NAMUR and ISO 5211 interfaces
- Position feedbacks
- Mounting of SIDE control positioner
- ATEX

Product variants described in the data sheet may differ from the product presentation and description.

### Type description

The Type 2052 pneumatic rotary actuator consists of a single or double-acting pneumatic linear piston actuator with an internal coupling to a rotary joint and a universal mechanical interface acc. to ISO 5211. The actuator shaft is rotated 90° via the coupling by the linear movement of the piston due to the compressive force of the pilot air or the force of the return springs. This rotation movement can be utilised for respective actuators such as ball valves, flaps, etc. The actuator has an optical display for the rotation position. The actuator is cataphoresis and Rilsan coated internally and externally which makes it very corrosion resistant and maintenance free.

## 4. Product operation

### 4.1. Functional overview

**Note:**

Top view

Control function A	Description
	<p>Air supplied to port "2" forces the pistons towards the actuator end caps, compressing the springs. A counter-clockwise rotation is achieved. Exhaust air exits from port 4.</p>
	<p>The loss of air pressure (air or electric failure) at port "2" allows the springs to force the pistons inwards. A clockwise rotation is achieved. Exhaust air exits from port 2.</p>
<p>Control function B</p> <p>-</p>	<p><b>Description</b></p> <p>For control function B, the rotating direction is the reverse of control function A.</p>
